BESPOKE AWNINGS & BLINDS

Family owned James Robertshaw has over 160 years experience of designing, manufacturing and installing bespoke awnings, coverings and blinds for the specific needs of operators in the leisure & hospitality, blind & curtain trade and residential sectors.

About Us.

Our story began back in 1860, when Mr James Robertshaw of Collyhurst, Manchester set up shop manufacturing traditional box shop awnings, complete with hand-carved woodwork. Added to this were metal roller blinds and other companion components, all fabricated on-site, beginning an unbroken trading history spanning an incredible seventeen decades, three centuries and two millennia.

During those first one hundred years, JR cemented its company status with a number of patents, including its famous 'Spring Roller' design in 1908. That commitment to innovation and technical advancement remained at the heart of the organisation ever since

From the Victorian age of the Industrial Revolution, through two World Wars and more than a few depressions, the company survived and thrived. It re-located from its original factory in Collyhurst and settled in a historical spinning mill in Farnworth.

The business stayed within the Robertshaw family until the death of James' grandson, William Lancelot Robertshaw in 1960 and was purchased by then Production Manager Arthur Harrison. It is then that the modern story of JR really begins.

In 1978, the company was taken over by 25 year old Nigel Sharrock, who would carry the JR brand from out of its Victorian history and into the modern world. For nearly forty years, Nigel continually strove to improve products, processes and service that JR is renowned for.

After Nigel's retirement in 2016, JR is still a family owned and managed business with Nigel's wife, Lesley and son Matthew, joining him sitting on the board of directors. In 2010 after 50 years at its Farnworth home, JR re-located again to its current, modern facilities and headquarters at Horwich, Bolton

All products are designed, manufactured and showcased within our current home and Customer Centre. With a wide reaching client base ranging from trade sub-dealers; independent bars and national hospitality brands; architects, contractors, residential, education and health-care; James Robertshaw has the creativity, expertise and knowledge to make a visible difference to any business or home.

James Robertshaw. We don't just find the solution, we create it.

Eliminate® 500 Zip Outdoor Roller Blind.

Big or small, manual or automation. Indoors or outdoors. Blackout or screen solutions.

High performance external zip roller blinds installed to the building's façade (in front of the glass on the outside) efficiently control solar glare (light), solar gain (heat) and UV (ultraviolet) to the buildings glazed areas, guaranteeing a cool, relaxed, and pleasant indoor space.

Forming a screen either in front of a buildings glazing or an open aperture space, outdoor roller blinds control and block a significant amount of the sun's solar gain energy, resulting in the reduction of temperature within the interior of the building or structure.

This keeps the interior space naturally cool and in turn reduces the carbon footprint requirement of air conditioning units and cooling devices. In addition to the thermal benefits, outside roller blinds also act as a wind and rain barrier.

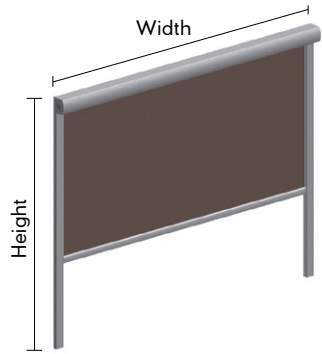

Outdoor roller blinds can cover all types of requirements in all dimensions including bi-folding and sliding doors along with open aperture spaces, including verandas, pergolas and even as a stand-alone product.

About the ZIP System

- The straight and avant-garde lines of the cassette box provide an aesthetic and contemporary design.
- This system includes the zip option to expand its possibilities and applications.
- The zip closure makes this range the perfect product to protect façade openings and to add Outdoor Roller Blinds to structures and pergolas.
- The absence of side openings allows an integral protection from the sun, the wind, and the rain.
- High wind resistance reaching Class 2 up to 38 Km/h.
- The fabric stays taut within the side guides.
- Fabric always protected thanks to the cassette profile.
- Provides thermal and visual comfort.
- It defines individual spaces, creating comfort zones protected from passer-by and the view of outsiders.
- Clippable guides that conceal screws and rivets.
- The clippable guides facilitate the assembly and maintenance works.
- The automatic clip support allows access and extraction of the roller unit without having to disassemble the whole system.
- Three fixing options to be suitable for the particularities of the installation: to wall, ceiling or in-between walls.
- The drop bar supports various counterweight configurations.

ELIMINATE® 500 OUTDOOR ROLLER BLIND SYSTEM

Eliminate® 500 Outdoor Roller Blind System.

Finishes:

- > Lacquer in accordance with QUALICOAT standards
- > Stainless steel screws and bolts

Guiding System:

- > Zip Guide

Installation:

- > Wall
- > Ceiling
- > In-Between Walls

Classification:

- > Wind: Up to 38 km/h
- > Standards: UNE-EN 13561:2015

Specification:

- > Width: 5,000mm
- > Height: 3,500mm

Operation:

- > Manual
- > Motorised
- > Automated

Application:

- Outdoors/Indoors
 - > Windows and Large Windows
 - > Vertical Structures
- Outdoors
