THE WINGLINE COLLECTION

BUTTERFLY AWNING SYSTEM

Shading & protection for terraces and outdoor food & drink areas

With the UK public experiencing holidays to far flung places they are becoming more accustomed to enjoying drinking and dining outdoors. Patios and decking at pubs, bars and restaurants are an increasingly popular area to enjoy a meal.

A WingLine butterfly awning system will protect diners from both the sun but also more importantly any adverse weather conditions providing a reliable and durable shelter. The WingLine is used primarily as a free-standing unit, and fits in optimally with the constructional situation on site. It extends synchronically on both sides and covers surfaces up to a massive 58 square metres!

Experience the quality of James Robertshaw

Like our entire solar shading portfolio, the WingLine Collection is CE tested. High quality, corrosion resistant materials and coatings guarantee a durable product (5 year component guarantee – subject to terms). You can be assured that all James Robertshaw products are manufactured in the UK by trained engineers.

! TIP

VARIOMOTION

A variable valance is an additional valance that can be extended vertically upto 1600mm at the awnings front profile. Variomotion is the 24V powered, electric variable valance. An RTS remote control is used for convenient operation of the variable valance.

! TIP

HEATER, LIGHT & AUDIO COMBINATION BARS

Enjoy your terrace or patio area with comfortable eco infrared heat, relaxing ambient light and soothing music from James Robertshaw. Sustainability & environment are a key element in our mission statement and reflected in our products. In times of rising energy prices and ecological change in particular, we are all the more committed to developing highly energy-efficient products and extending our position as the technology leader. The new generation of our ECO Plus radiant heat, lights and audio is the result of continuous improvement of our products. It enhances the product experience while at the same time reducing energy consumption. Heat that reaches you! This customisable heat-light-audio combination is versatile and leaves nothing to be desired with respect to heat, light and comfort. The combination bars are also available as separate units.

INSTALLATION & OPERATION

The WingLine's many applications are a winning proposition. The system is installed with posts whose base plates are installed onto a firm surface (for example concrete). However, WingLine can also be installed onto a wall.

Operation of the WingLine is by Somfy RTS remote control, as standard.

RTS radio controlled motor

! TIP

SAFETY & COMFORT WITHOUT PRESSING A BUTTON!

The sun & wind vibration sensor constantly measures the current intensity of the sun and the wind speed. When the sun shines, the awning extends, if the wind is too strong, it retracts the awning, whenever possible. The wind or vibration sensor acts as a preventative measure and does not guarantee the complete safety of the butterfly awning system. Responsibility to retract the butterfly awning system in adverse weather conditions remains the responsibility of the user.

SIZE DIMENSIONS

Enjoy the feeling of unrestricted space with your WingLine. Systems with a projection of 4500mm on either side can be manufactured upto 6500mm width, while systems with a maximum width of 7000mm can have a projection upto 4000mm, on either side.

The adjustable pitch inclination angle from 5° – 30° and the three available post heights of 2600mm, 3000mm & 3400mm offer a high degree of flexibility to accommodate your own requirements.

Advantages that count!

One roller tube – less material, less cost.

System width upto 7000mm.

Projection on both sides upto 4500mm, dependent upon system width.

Extendable variable valance, if the sun is low.

Continuous aluminium roof protecting mechanical parts and fabric.

Light and heat bars.

! TIP

PRINTABLE / SIGN WRITTEN MATERIAL

If you run a café, restaurant or bar with a patio or garden area, whilst protecting your clients from the uncertain factor of changeable weathers – what better way to advertise your business? Copy or logos can be printed onto the fabric for perfect advertising opportunities. Photographs can even be printed on to the WingLine fabric to create a special atmosphere.

In addition to choosing the fabric for the awning, you can also decide what valance style you prefer. James Robertshaw offers a choice of 6 different styles and many different colours for the borders.

It is recommended to install WingLine with acrylic material. Soltis is the preferred option for pure shading solutions, acrylic has the added advantage of high water repellence.

ACRYLIC MATERIAL: GIOVANARDI

Giovanardi UV Protection Acrylic fabrics are high quality awning fabric materials incorporating several reinforcements that make them ideal for demanding outdoor applications. The UV protection of the fabrics according to UV Standard 801 ranges from factor 40 – 80.

White:
RAL 9010

Silver:
RAL 9006

Light Ivory:
RAL 1015

TEXGARD – EASY CLEAN

A special finishing process lends the fabric beneficial properties. These include low dirt absorption, good weather repellent qualities and lower surface tension. The unique method by which the material is fixed also ensures that this effect is remarkably durable, providing the best possible protection against penetration by moisture, water and dirt.

ALL WEATHER

The All Weather quality is a fabric manufactured from spinning nozzle coloured acrylic with a coating on one side, combining optimum protection against the sun, with protection against drizzle or light rain.

PVC SCREEN MATERIAL: SOLTIS (FOR VARIABLE VALANCE ONLY)

Soltis fabrics offer greater natural light, exceptional transparency, thus a clearer view from inside to outside. Soltis materials are also highly weather resistant and can stand up to all variations in the weather without becoming damaged or losing their smooth finish and UV protection properties.

PVC Soltis

All Weather

FRAME / HARDWARE COLOURS

Wide choices of colours are available not only for the fabrics, but also the hardware. If the standard white (RAL 9010), Silver (RAL 9006) or Light Ivory (RAL 1015) does not meet your requirements, we also offer, at a premium, an additional 210 bespoke RAL colours!

JAMES ROBERTSHAW SUPERIOR SOLAR SHADING SINCE 1860

Designing sunlight for you since 1860!

Our mission is to allow sunlight into your home or business in a controlled manner so that you really feel the full benefits. James Robertshaw's tailored sun blind products transform your home or business with both light and shade.
